### COURSE IN HOSPITAL

Patient was admitted for the prospective liver transplantation, in view of her underlying liver disease. But she had continues spikes of fever, with thrombophlebitis. She was evaluated with infective panel. All the infective panel of tests were negative, except for Dengue IgM. She was managed conservatively and fever spikes reduced. She has few rashes (Secondary to Dengue) over her limbs, but she is clinically stable and platelets are within acceptable limits. Liver Transplant was called off, in view of her ongoing fever spikes with Dengue. She is being discharged with the following advice, in a stable condition.
